## Digital Gauge General Catalog

# 摺動力

Magnescale's advanced ball-spline construction allows for smoother measurements while also increasing side-load capacity, torsion resistance and performance up to 60 million strokes.

This innovative new construction allows for high precision measurements even in the most severe environments.

This is the new DK-S Series.

Conceptual diagram

000

Magnescale magnetic technology diagram

# Digital Gauge Features & Superiority

## **DK800S** Series

Adapts bearings of new construction superior in sliding force and durability. It has slim shape whose main body size is  $\varphi 8$  mm and is high-precision digital gauge suitable for automatic measurements.

- Achieved number of strokes: 60 million
- Maximum resolution: 0.1 μm
- Response Speed: 250 m/min (at resolution of 0.5 μm)
- Adopt: High-flex cable (standard)
- Adopt: IP67 rating with bellows
- Linear encoder technology allows high precision measuring over the entire range.

## **DK** Series

High rigidity Φ20mm body is suitable for harsh environments. Also, it enables high response speed in automatic measurements.

- According to varied materials to be measured, measuring force can be selected.
- Available in lengths up to 205mm with 0.5µm resolution.
- Magnetic feeler tips equipped as standard make it easy to integrate into machines. (DK155/205)
- High-flex cable (standard): 250 m/min (at resolution of 0.5 μm)
- High-flex cable (standard)
- Linear encoder technology allows high precision measuring over the entire range.

Easy integration into machines with compact square body.

• Compact size and high rigidity

It is suitable for general purpose and automatic measurements.

#### Compact LT Series counters of DIN size

- Current, maximum and minimum, and P-P value measuring function
- Comparator
- 2-axis ADD/SUB function
- BCD/RS-232C input/output
- Reference point function

#### Multifunctional counters

• Optional expansion boards available (LY71)

BCD output(LY71)

- Comparator(Relay,open collector output) (LY71)
- RS232-C Output (LY72)

#### Multipoint measurement Intelligent Network Systems: MG40 series

 Equipped with Ethernet interface as standard and supporting CC-Link

#### Unit: MG10/20/30 series

• Equipped with RS-232C interface as standard

# Application

### Height, flatness, and inclination measurements

Assembled part measurement and shim selection

even in harsh environments.

tight spaces at narrow measuring pitches.

• \$\Phi 8mm body of the DK800S allows for multiple measurements in

Magnetic technology ensures consistent measurements,

Measurements can be taken immediately upon turning up.

- Flatness measurement of compact motors
  - Others

height

measurement

Thickness and Flexure measurement measurement of compressor parts

·Cylinder block flatness Thread height · Turbine blade shape ·Bearing height measurement measurement ·Camber measurement of die-· Toe and alignment test ·Crimp-on terminal caulking cast chassis parts, etc.

### Thickness and inner and outer diameter measurements

Film thickness measurement

Tapered roller bearing measurement

- Digital measurement system assures full-stroke accuracy and supports multiproduct lines.
- Magnetic technology ensures consistent measurements, even in harsh environments.
- The DK-S Series has been achieved 60 million strokes, ensuring years of service.

Bearing inner diameter measurement

#### Others

·CVT belt thickness measurement ·Measurements on a surface ·Metal plate and resin plate grinding machine thickness measurement · Shim thickness measurement Steel ball diameter measurement ·Gasket thickness measurement. etc

Cam shaft run-out and shape measurement

Motor shaft run-out measurement

- The new construction of spindle bearings increases both side-load capacity and torque resistance.
- Digital data output allows for real-time measurements.
- The DK-S Series has been achieved 60 million strokes, ensuring years of service.

### Displacement and stop position measurement

Work alignment measurement

- Roller-to-roller gap measurement
- Magnetic technology assures protection against impact resistance.
- Measurements can be taken immediately upon turning up.
- Real-time digital data output allows gauges to be used for position control applications in a full closed-loop system.

### Deflection and shape measurement

Disk run-out measurement

#### Others

- Crank shaft journal run-out measurement
- · Drive shaft or propeller shaft run-out measurement
- ·Bearing part run-out measurement, etc.

Pressing machine's or injection molding machine's stop position measurement

#### Others

- · Top and bottom dead center control of piston parts
- ·Measurement of material strength (such as camber)
- ·Measurement of press-fit part's press-fit amount
- ·Coater's nozzle height
- measurement, etc.

### DK Series measuring unit output signals

The signal output from these measuring units are A/B/Z reference point, voltage differential line driver (compliant with EIA-422) output compliant with EIA-422.

#### The reference point is synchronized with A and B phases at high impedance. (Note: this may not be worded correctly)

The A/B quadrature output signal by measuring unit is 5 MHz maximum with a minimum phase difference of 50 ns for DK800SA and is 2.5 MHz maximum with a minimum phase difference of 100 ns for DK800SB. The counter or control devise capable of processing these signals should be used.

#### **Output Signal Phase Difference**

Moving length of the measuring unit is detected every 50 ns for the DK800SA/DK and every 100 ns for the DK800SB, and the phase difference proportional to the amount traveled is output.

The amount of phase difference changes in integer multiples of 50 ns or 100 ns. Also, the minimum phase difference for the phase A and B is 50 ns for the DK800SA/DK and 100 ns for the DK800SB.

In the standard specifications, the minimum phase difference is fixed at 50 ns for the DK800SA and 100 ns for the DK800SB, however, the minimum phase differences in the following table below are available as special specifications.

Phase A/B	Phase A single quelo	Counter's permissible	Maximum response speed		Pomarke	
Minimum phase difference	Filase A single cycle	frequency	Resolution 0.1 µm	Resolution 0.5 µm	nelliaiks	
50ns	200ns	5MHz	80m/min	250m/min	DK800SA standard product	
100ns	400ns	2.5MHz	42m/min	100m/min	DK800SB standard product	
300ns	1.2µs	833kHz	14m/min	33m/min	Special specifications	
500ns	2µs	500kHz	8.4m/min	20m/min	Special specifications	

#### **Output Signal Alarm**

If the response speed is exceeded, the phase A/B output from this measuring unit changes to high impedance state for about 400 ms as an alarm.

### DK Series operating cautions

• For the pneumatic push type, use of the pneumatic circuit shown in Fig. 1 enables the feeler to be air driven. Pressure regulation is required depending on the usage condition. A precision pressure regulator (e.g., SMC IR2010 or equivalent) should be used. • For the vacuum suction type, use of the pneumatic circuit shown in Fig. 2 enables the feeler to be air driven.

For DK the A/B quadrature output signal by measuring unit is 5 MHz maximum with a minimum phase difference of 50 ns . The counter or control devise capable of processing these signals should be used.

# Installation

### Mounting of MG41/42 main unit

The MG41/42 main unit can be mounted to DIN rail in electrical component panel. At factory shipment, the hook of DIN rail fixing lever is locked. DIN rail specifications: 35 mm

1. Match the upper side of groove on the back of the MG41 main unit with the upper side of DIN rail.

2. Push and install the MG41 main unit until a click is heard so that the lower side of groove on the back of the MG41 main unit is fit into the DIN rail.

The multi-interface unit is composed of various modules.

#### Mounting to DIN rail

1. Match the upper side of groove on the back of the unit with the upper side of DIN rail.

Install the main unit to panel using provided four screws  $(+3 \times 6)$  and four nuts (M3).

### MG10/20/30 connection

2. Push and install the unit until a click is heard so that the lower side of groove on the back of the unit is fit into the DIN rail.

Specifications				
Model	LY71			
Compatible measuring units	DK Series (connection cable CE29 required), GB-ER, SJ700A Series (Magnescale)/PL20 Series (Digiruler)			
Number of input axes	1 axis or 2 axes (by parameter setting)			
Input resolution	Linear standard: 0.1 / 0.5 / 1/5 / 10 µm (expanded linear: 0.05 / 2 / 20 / 25 / 50 / 100 µm), Angle: 1 s / 10 s / 1 min / 10 min, (Expanded angle: 1 degree)			
Number of display axes	3 axes (axes A, B, and C), When LZ71-KR is used: 1 axis (A-axis display) only, B- and C-axis display is fixed to comparator value display.			
	Current, max., min., and peak-to-peak values (= max. value - min value) of each axis or current, max., min., and peak-to-peak values (= max. value - min value) of 2-axis addition and subtraction			
Display data	Setting of axis to be displayed can be set by parameter. Data (current value, max. value, etc.) to be displayed can be switched by key operation.			
	(Addition and subtraction display is impossible if two LZ71-Bs are used.)			
Display resolution	Measuring unit input resolution or more. It is possible to provide simple angle display by adhering Digiruler in arc. (There are limitations on displayable resolution depending on radius size.)			
Direction	Parameter-based polarity setting for each axis			
Alarm display	Measuring unit unconnected, excess speed, display-digit overflow			
Addition and subtraction function	2-axis addition and subtraction is possible, but axis-based calculation is impossible during addition or subtraction (addition and subtraction display is impossible during use of two LZ71-Bs).			
Peak hold function	Peak calculation of each axis or addition or subtraction value can be made (calculation of each axis (single axis) cannot be made during addition or subtraction).			
Restart	Starts peak hold calculation of each axis/all axes. Operation is made by key operation or general external input.			
Hold function (latch and pause) Latch = display and output holding Pause = peak calculation holding	Latch function or pause function (selected by parameter setting) Operation: key operation or general external input			
Comparator function	Available only when LZ71-KR is used (separated into 5 areas). 16 sets of set values can be set with 1 to 4 set values taken as 1 set for 1 axis or addition/ subtraction value, but single-axis setting cannot be made during addition or subtraction. (Switching of a set is made by key operation or LZ71-KR external input.)			
Positioning function	Available only when LZ71-KR is used. A pulse signal of 0.5 s is output when a set value (1 point) is passed through. 16 sets of set values are settable. Unavailable if comparator function is selected. (Comparator/positioning function is selected by parameter setting.)			
	External reset and external preset recall for each axis (4 in total), 1 general input for each axis and 1 common (3 in total)			
Input signal	For general input, 3 items are selected from hold, restart, display switching (switching between current and peak values), and reference point loaded (datum value reproduction start).			
	Input circuit: +12-24 V photocoupler (isolation from internal circuit = power supply Vcc = 12-24 V required)			
	2 for each axis (4 in total)			
Output signal	General output (2 items are selected from alarm, display data (current or peak value), reference-point passing, reference-point alarm, and zero-point passing.)			
	Output circuit: open collector (photocoupler) 12-24 V, isolated from internal circuit			
Comparator judgment output	Available only when LZ71-KR is used. Open collector (isolated from photocoupler and 12-24 V internal circuit) and relay (24 V DC/100 V AC at 0.3 A, ON time: approx. 2 ms, OFF time: approx. 1 ms)			
BCD output	Available only when LZ71-B is used. One LZ71-B is used: 1st or 2nd axis or current and peak values of addition and subtraction values. When two LZ71-Bs are used: current and peak values of 1st axis for 1st LZ71-B and current and peak values of 2nd axis for 2nd LZ71-B. One LZ71-B can output three types of values.			
RS-232C input/output	_			
A/B phase output	Available only when LZ71-HT01 is used. Top stage is fixed to 1st-axis output, while middle stage is fixed to 2nd-axis output.			
Expansion unit	LZ71-KR, LZ71-B, LZ71-HT01 (Up to two units can be used)			
Reset	Reset can be made by key operation or external reset input.			
Preset	A value can be set by key operation and a value set by external preset recall can be recalled.			
Master calibration function	Provided			
Datum point/Reference point function	Provided			
Key lock function	Provided (presence/absence of setting is set by parameter)			
Data storage	Storage/no-storage can be set.			
Scaling function	Provided (0.100000 to 9.99999)			
Liner compensation	Provided (±600 μm/m)			
Power supply	Optional PSC-21/22/23 adapter is used.			
Power consumption	32 VA max. (when optional AC adapter is used)			
Operating temperature range	0 to 40 ℃			
Storage temperature range	-20 to 60 °C

# Technical information

### LT Series Usage Notes

#### I/O connector

The I/O connector on the rear panel of the counter unit has functions for Go/No-go output based on the comparator function, start input, pause input, RS-232C trigger input, and reset input.

< Connector pin assignment >

Use a shielded cable for connection to the FG pin on the rear of the counter unit. (Prepare a shield cable by yourself.)

Connector used: MC1.5/7-ST-3.5 (provided) made by Phoenix Contact

Pin No.	Signal name	IN/OUT	Description
1	GND	-	
2	START(A)	IN	Start/latch input (A)
3	PAUSE (A)	IN	Pause input (A)
4	START(B)	IN	Start/latch input (B) *1
5	PAUSE (B)	IN	RS-232C data output and trigger input
6	RS-TRG	IN	
7	GND	-	

\*1 Connection is prohibited for 1-channel model \*2 Connection is prohibited for models other than RS-232C model

Fig.1

When mounting in a panel

- 1. Cut out an opening to match the dimensions shown (Fig.2)
- 2. Insert the display unit into the cut-out opening in the panel from the front.
- 3. Attach the supplied installation brackets (upper/lower) from the rear.
- 4. Use fingers to tighten and secure.
- Note: When attaching the installation brackets to the display unit, leave sufficient space (min. 30mm) between it and the panel (Fig.3).

2	NC	-	Connection prohibited
3	RESET (A)	IN	Reset input (A CH)
4	LO (A)	OUT	Go/No-go output Low (A CH)
5	GO (A)	OUT	Go/No-go output Go (A CH)
6	HI (A)	OUT	Go/No-go output High (A CH)
7	GND	-	

#### I/O connector B (not provided for 1-channel models)

Pin No.	Signal name	IN/OUT	Description
1	GND	-	
2	NC	-	Connection prohibited
3	RESET (B)	IN	Reset input (B CH)
4	LO (B)	OUT	Go/No-go output Low (B CH)
5	GO (B)	OUT	Go/No-go output Go (B CH)
6	HI (B)	OUT	Go/No-go output High (B CH)
7	GND	-	

< Go/no-go judgment output >

High: Display value > upper limit → "L" (ON)

Go: Upper limit  $\geq$  display value  $\geq$  lower limit  $\rightarrow$  "L" (ON)

Low: Lower limit > display value → "L" (ON)

Note: All go/no-go judgment outputs become "H" (OFF) if alarm occurs.

<Start/latch input>

• If judgment output is "L" (ON), the max. and min. values are set to the current value (and peak-to-peak value is "0"), and new holding starts (start function).

• When initial settings are set to shipment settings, if the measuring mode is in current value mode.

go/no-go judgment output (I/O connector) and display are held at "L" (ON) (latch function).

Note: While judgment output is "L" (ON), reset/present value recall by reset key or using an external reset/preset value recall input signal becomes invalid.

<Reset input>

Measured value is set to "0" if judgment output is "L" (0N). If a preset is made, a preset value is recalled. Note: Even if "L" (ON) is left as is, go/no-go judgment output (I/O connector) and display are not held.

## **Technical Information**

### Useful functions of counter units LT10A/LT11A/LT30

The combination of a high-accuracy digital gauge and an LT-series multifunction counter allows the following measurements to be made. The internal counter always holds "current value," "maximum value," "minimum value," and "peak-to-peak value" irrespective of the measuring mode (current, maximum, minimum, and peak-to-peak values).

### Datum-point reproduction function using a DK Series digital gauge and LT30 Series counter

Up to now, even when master (datum point) calibration is made, the current position is reset if power supply is turned OFF. Thus, master (datum point) calibration needs to be made again using the master (datum point) at power ON. The DK Series Digital Gauges incorporate the reference point; once master (datum point) calibration is made, the counter can store data and reproduce the datum point without master (datum point) calibration in the reference-point referring function.

- (1) First, a difference value between a digital gauge's built-in reference point and master (datum point) is measured to preset the master (datum point). If the master (datum point) is 0 (zero), a difference value is preset to 0 (zero). \* The reference point is at the position where the spindle is pushed by 1 mm or more
- (2) When the counter's power supply is turned ON again, the counter starts up in the reference-point referring mode and display blinks in "0", causing the counter to enter reference-point detection waiting status. When the spindle is pushed and passes through the reference point, counting is made by the current value display from the master (datum point) position. (The counter stores internally a difference value between the master (datum point) and reference point in memory.)

#### Latch function

The latch function holds output data and go/no-go judgment output with respect to its value in the current value mode.

## [Latch conditions] Start input signal is set as latch input in parameter setting. Current value mode Note: This function does not work if the measuring mode is in peak-value mode

#### Using an LT Series Counter as a multistage comparator

For the LT Series counters, comparator settings are lower and upper limit settings as standard; no setting range can be increased. The LT Series' BCD output specifications allow up to four sets of combinations of setting values (upper and lower limits) of the comparator to be registered. This allows an LT Series counter as a multistage comparator. Combining ON/OFF of pins 35 and 36 of the BCD output connector allows four ways (4 sets) of switching to be made. (Four sets of comparators can be set from 1st set (smallest range) to 4th set (largest range).)

BCD output connector		nnector	"L"(ON) "H"(OFF)		Judgment	LED display	Conditions	
	No. 35 pin	No. 36 pin	Upper and lower limits of comparator values		U		Management states a supervise the la	
	н	н	Upper and lower limits of 1st set		High		Measured data > upper limit	
	L	н	Upper and lower limits of 2nd set		Go	0	Upper limit ≥ measured data ≥ lower limit	
	н	L	Upper and lower limits of 3rd set					
	L	L	Upper and lower limits of 4th set		Low	Low	$\bigtriangledown$	Lower limit > measured data

### No compromise for high-accuracy products

The total quality control system that operates throughout the entire design and production process ensures products with enhanced safety, high quality, and high reliability that match our customers' requirements. The company is certified for length calibration in compliance with the traceability system required by the "Weights and Measures Act," and has been granted ISO 9001 certification, which is the international standard for quality assurance.

Magnescale Co., Ltd. is registered to ISO 9001 (Quality)

Our products comply with CE Marking requirements, have acquired UL certifications and meet other regulations, ensuring safe use the world over.

We have met:

- •EMC Directives(CE)
- EMI: EN 55011 Group 1 Class A / 91 EMS: EN 61000-6-2

•FCC regulation

FCC Part 15 Subpart B Class A

for Products with built-in AC power supply: •UL61010-1 •EN61010-1

for Products with Laser: •DHHS (21CFR1040.10) •IEC60825-1

\* When using our devices with machines to which the European Machinery Drirective applies, please make sure that the devices when installed on the machines fulfil the applicable requirements of the Directive \* Standards or regulations to be complied with may vary by product.
